

DESCRIPTION

The Amazfit Cheetah is an ultra-lightweight, premium HD AMOLED display watch for active people who want to run in style. Take your running to the next level and become the runner you aspire to be, with AI-powered personalised training guidance and industry-leading GPS accuracy that stays on track, wherever you go running.

Premium HD AMOLED display

The Amazfit Cheetah's ultra-large 1.75' HD AMOLED display delivers exceptional clarity with up to 1000 nits of brightness, ensuring crystal-clear viewing no matter where you're running. In addition, its slim and lightweight design, with durable materials such as fibre-reinforced polymer and a sleek metal bezel, means the watch weighs just 25g and is 9.9mm thick. Equipped with two buttons and a crown, it offers easy and convenient control while on the move.

Up to 8 days of autonomy

With a battery life of up to 8 days in normal use, 4 days in heavy use and 13 hours with continuous GPS, the Amazfit Cheetah is designed to power through your adventures with as much energy as you do. With its automatic GPS mode, the watch intelligently adjusts GPS settings to save power when running in areas with strong satellite signals, ensuring you get the battery life you need for every training session.

Market-leading GPS technology

Amazfit's dual-band circularly polarised GPS antenna technology, known as MaxTrack, optimises satellite signal reception for your GPS smartwatch. It can pick up L1 and L5 satellite signals for precise location tracking and supports six satellite positioning systems for reliable coverage. Even in dense urban environments with tall buildings or heavily vegetated areas, MaxTrack reduces multipath interference, ensuring you always have an accurate location, even when you're running.

AI-personalised plans

Zepp Coach uses artificial intelligence to provide you with personalised running plans that are tailored to your level, goals and the type of race you have scheduled, also taking into account the date. Each week, the system adapts your plan based on your performance and gives you scientific guidance to help you make optimal progress in your training.

24/7 health monitoring

This smartwatch offers advanced tracking of your health and fitness at all times. Its optical BioTracker PPG sensor gives you accurate measurements of your heart rate, blood oxygen levels, stress level and sleep quality. When you're out for a run, you can easily connect to a heart rate belt thanks to the Zepp OS 2.0's robust Wireless connectivity, focused on improving your well-being.

Other day-to-day extras

By connecting your watch via Wireless to your phone, you can manage functions such as the camera and music, as well as other additional features. You can also store music directly on the watch so you can enjoy your favourite tracks without

relying on your smartphone.
